BIOSIS, a not-for-profit organization serving the life science community since 1926, is the publisher of *Biological Abstracts*® and *Biological Abstracts/RRM*® (*Reports, Reviews, Meetings*) in print and CD-ROM formats, and is joint publisher of *Zoological Record* with the Zoological Society of London. Other BIOSIS CD-ROM products include: *BIOSIS Previews*® on CD, *Foods Intelligence*® on CD, *TOXLINE Plus*, and *Zoological Record on CD*™. BIOSIS produces the online databases *BIOSIS Previews*, *BasicBIOSIS*®, *MethodsFinder*™, and *Zoological Record Online*® and is a major contributor to the *TOXLINE* database. BIOSIS and CABI Publishing are joint publishers of the Web-based product, *BiologyBridge to Entomology*. BIOSIS also offers a document delivery service, *BIOSIS Document Express*™, in conjunction with Advanced Information Consultants Inc. (AIC).

ABSTRACTS OF MYCOLOGY contains entries of pure and applied research studies involving fungi, lichens, and fungicides. Reviews and meetings also may be included.

ABSTRACTS OF MYCOLOGY encompasses the following research areas:

- Agronomy
- Air Pollution
- Allergy
- Biological Control
- Chemotherapy (Antifungal Agents)
- Cytology
- Ecology
- Food, Industrial Microbiology
- Forestry
- Genetics
- Immunology
- Medical, Clinical Microbiology (Mycology)
- Neoplasms
- Pharmaceutical Botany
- Plant Biochemistry
- Plant Biophysics
- Plant Disease Caused by Fungi
- Plant Morphology
- Plant Physiology
- Public Health
- Radiation Biology
- Soil Microbiology
- Systematics
- Toxicology

Three indexes are included: Author (personal and corporate author names), Organism (taxonomic names), and Subject (specific words).

CUMULATIVE AUTHOR INDEX

Uses

The Author Index is used to locate entries when specific personal or corporate author names are known.

Features

The Author Index is an alphabetically ordered listing of personal and corporate author names. For each author or coauthor cited, a separate entry is created. Each name is followed by the reference number(s) of the item(s).

AUTHOR INDEX (Personal or Corporate Names)

Name	Ref. No.
Adams Research Study Group	2468
Glanzman, David L.	9890
Hempel, Arnold T., Jr.	1256
Maierau, Marie-Pierre	334
McDermott, J. R.	10323
Murphy, Geoffrey G.	9890

Special Features

Personal Names:

- Family names are followed by the first name (if provided) and any initials and patronyms given in the original item.*
- Prefixes such as De, La, Van, or Von are followed by a space if listed as such in the original publication (e.g., De Ville).
- Family names with O', M', Mc, or Mac have no space (e.g., McClellan).
- Family hierarchy (Sr., Jr., I, II, or III) notations follow the initials (e.g., Simpson, J., Sr.).
- Hyphens and spaces are retained as in the original (e.g., Smith-Jones).
- Titles are omitted unless a personal name is not given in the original source (e.g., Lord Mountbatten).

Corporate Names:

- When a corporate body is the only source indicated in the original item, it is used in the Author Index. A geographic location is given in cases where the corporate name is ambiguous.
- Acronyms are listed without spaces between the letters (e.g., WHO).

How to Search

1. Select the name to be searched. Check all variants.
2. Locate personal or corporate name in alphabetical position.
3. Use reference numbers to find individual entries.

*Additional information on BIOSIS' treatment of author names can be found in the "Editorial Policies" section of the *BIOSIS Search Guide*.

CUMULATIVE ORGANISM INDEX

Uses

The ORGANISM INDEX is used to find entries by taxonomic category. It provides hierarchical access to taxonomic names for locating references to related organisms. Entries are arranged according to BIOSIS' taxonomic hierarchy and consist of common, cell line, virus, and scientific organism names. All names that are not part of the taxonomic hierarchy are included as provided by the author in the original document. Within each entry, items appear with their related Major Concepts and additional context terms. These terms will identify additional details, developmental stages, or roles among organisms, such as predator, prey, and animal models to clarify the emphasis and relationship in the original document.

Features

- The Organism Index is arranged hierarchically from broad to narrow groupings according to the taxonomic classification shown in the Major Taxonomic Classifications list on page Org-ii. Within a higher classification (e.g., **FUNGI**), more specific taxonomic levels (e.g., **Basidiomycetes**) are generally listed. Organism names are placed within the hierarchy at their lowest possible level.
- Genus species names (italicized) also appear alphabetically in the Subject Index and include the related family name (or appropriate broader taxonomic category) for easy entry into the Organism Index.
- Each entry is followed by Major Concepts and additional context terms where they apply.
- When appropriate, modifiers for Review Article (R), New Taxa (N), and Fossil Taxa (†) appear in the right margin following the reference number.
- A question mark (?) following an organism name indicates uncertain identification.
- Some organisms are indexed to more than one taxonomic category; for example, myxomycetes are indexed under both **Fungi** and **Protozoa**.
- Beginning in 1992, blue-green algae (Cyanophyta) are indexed under **Cyanobacteria**, rather than under **Algae**.

How to Search

1. Consult the Major Taxonomic Classifications list on page Org-ii. If you are searching a genus species name and are unsure of its higher taxonomic classification, consult the Subject Index.
2. Find appropriate higher and lower taxonomic categories.
3. Note Major Concept and additional context terms.
4. Note modifiers for new taxonomic or fossil information.
5. Use reference numbers to find individual entries.

MAJOR TAXONOMIC CLASSIFICATIONS

Major taxa appear in the index in the order given below. Most are subdivided alphabetically into lower-level taxa, but these appear in the index only if there are references.
